

Numerical diagnostics, interaction experiment

endpoints with diagnostics: 100/100

median bookkeeping IDENTITY residual = 0 (roundoff only, NOT a conservation test)

median $\beta E_{\text{LL-vs-flux}}/E_{\text{rad}} = 0.503029$ (independent physical residual)

E_{bound} is defined as the residual that closes the balance, so the

identity above cannot be quoted as evidence of energy conservation.

Classical low-velocity model; not QED.
