

Numerical diagnostics, interaction experiment

endpoints with diagnostics: 60/60

median bookkeeping IDENTITY residual = 2.89079e-05 (roundoff only, NOT a conservation test)

median  $\delta E_{\text{LL-vs-flux}}/E_{\text{rad}} = 1$  (independent physical residual)

$E_{\text{bound}}$  is defined as the residual that closes the balance, so the

identity above cannot be quoted as evidence of energy conservation.

Classical low-velocity model; not QED.
